

# Introduction to Operating Systems

## Lab 2: Pintos & Project 1

GAO Ming

SE@ECNU

(for course related communications)

mgao@sei.ecnu.edu.cn

Mar. 19, 2014

# Outline

- 1 Project 1: Threads in Pintos
  - Data structures
  - Synchronization
- 2 Requirements to the project
  - Alarm clock
  - Priority scheduling
  - Advanced scheduling
- 3 Administrative issues
  - Lab report
  - Hand-ins and deadline
  - Scoring
- 4 Tips
  - ctags
  - Testing
  - gdb

# Pintos

- Introduction/manual:  
`http://www.stanford.edu/class/cs140/projects/pintos/pintos\_1.html`
- PDF manual:  
`http://www.stanford.edu/class/cs140/projects/pintos/pintos.pdf`
- All things you need:  
`http://www.stanford.edu/class/cs140/projects/pintos/`
- Source:  
`http://www.stanford.edu/class/cs140/projects/pintos/pintos.tar.gz`

# Install Pintos in OSProj Virtual Machine

Pls. refer to materials in past courses.

- 2009\_lab\_1.pdf
- 2009\_lab\_2.pdf

# Install Pintos

- [http://www.stanford.edu/class/cs140/projects/pintos/pintos\\_12.html](http://www.stanford.edu/class/cs140/projects/pintos/pintos_12.html)

# Outline

- 1 Project 1: Threads in Pintos
  - Data structures
  - Synchronization
- 2 Requirements to the project
  - Alarm clock
  - Priority scheduling
  - Advanced scheduling
- 3 Administrative issues
  - Lab report
  - Hand-ins and deadline
  - Scoring
- 4 Tips
  - ctags
  - Testing
  - gdb

# Data structures

- Read thread related source code
  - threads/init.c
  - threads/thread.h, thread.c
  - threads/switch.h
  - threads/synch.h, synch.c
  - devices/timer.c, timer.h

# Synchronization

Solution that disable interrupts:

- threads/synch.h, synch.c

# Outline

- 1 Project 1: Threads in Pintos
  - Data structures
  - Synchronization
- 2 Requirements to the project
  - Alarm clock
  - Priority scheduling
  - Advanced scheduling
- 3 Administrative issues
  - Lab report
  - Hand-ins and deadline
  - Scoring
- 4 Tips
  - ctags
  - Testing
  - gdb

# Alarm clock

Reimplement: `void timer_sleep (int64_t ticks)`

- In `devices/timer.c`
- Without using busy waiting

# Priority scheduling

- Implement priority scheduling
- Implement priority donation (for locks)
- Implement set/get priority functions

# Introduction to the 4.4BSD scheduler

## Multi-level feed-back queue scheduling

- $\text{priority} = \text{PRI\_MAX} - (\text{recent\_cpu} / 4) - (\text{nice} * 2)$
- $\text{recent\_cpu} = (2 * \text{load\_avg}) / (2 * \text{load\_avg} + 1) * \text{recent\_cpu} + \text{nice}$
- $\text{load\_avg} = (59/60) * \text{load\_avg} + (1/60) * \text{ready\_threads}$

# Notes

- No floating-point arithmetic in the kernel
- Assume that  $x$  and  $y$  are fixed-point numbers, and  $n$  is an integer. Fixed point numbers are in signed  $p.q$  format, where  $p + q = 31$ , and  $f$  is  $1 \ll q$ :

convert  $n$  to fixed point :  $n * f$

convert  $x$  to integer (rounding toward zero) :  $x/f$

convert  $x$  to integer (rounding toward nearest) :  $(x + f/2)/f$  if  $x \geq 0$ ,  
 $(x - f/2)/f$  if  $x \leq 0$

add  $x$  and  $y$  :  $x + y$

subtract  $y$  from  $x$  :  $x - y$

add  $x$  and  $n$  :  $x + n * f$

subtract  $n$  from  $x$  :  $x - n * f$

multiply  $x$  by  $y$  :  $((\text{int64\_t})x) * y / f$

multiply  $x$  by  $n$  :  $x * y$

divide  $x$  by  $y$  :  $((\text{int64\_t})x) * f / y$

divide  $x$  by  $n$  :  $x / y$

# Outline

- 1 Project 1: Threads in Pintos
  - Data structures
  - Synchronization
- 2 Requirements to the project
  - Alarm clock
  - Priority scheduling
  - Advanced scheduling
- 3 Administrative issues**
  - Lab report
  - Hand-ins and deadline
  - Scoring
- 4 Tips
  - ctags
  - Testing
  - gdb

# Lab report

- ① Data structures: see Manual Appendix D
- ② Algorithms: see Manual Appendix D
- ③ Synchronization: see Manual Appendix D
- ④ Rationale: see Manual Appendix D
- ⑤ Known errors: the summary of the testing, and your explanation on failed tests

# Hand-ins and deadline

- All hand-ins (code and lab report) should be received before/on April 13, 2014 (before the end of our class)
- What to submit?
  - A lab report: by hand with a printed attachment on A4 papers
  - An zipped package (the file name is xxxxxxxx.zip, where xxxxxxxx is your full student id) with following files should be sent to my gmail address (os.sei.ecnu@gmail.com) vis an email with title: proj1\_submit:
    - The lab report attachment: in plain txt format, in English, in the root directory of the zipped file
    - All source code files you modified or added: in relative path corresponding to pintos/src  
e.g. if you've modified synch.c in pintos/src/threads, then the file synch.c should appear in /threads of the package
    - A readme file states all things that I should notice on your submission. It could be left as a blank file if you have nothing to say. But the file **must** exist.

# Scoring

$$\frac{P}{P+F} \times 50\% + S \times 50\%$$

- P: number of items passed the test
- F: number of items failed in the test
- S: score on your lab report

Note:

- Inconsistency between your implementation and your report will increase F and decrease P.
- Copy other's code is not allowed.
- Cheating is not allowed.

# Outline

- 1 Project 1: Threads in Pintos
  - Data structures
  - Synchronization
- 2 Requirements to the project
  - Alarm clock
  - Priority scheduling
  - Advanced scheduling
- 3 Administrative issues
  - Lab report
  - Hand-ins and deadline
  - Scoring
- 4 **Tips**
  - ctags
  - Testing
  - gdb

# Ctags

```
>cd /Desktop/pintos/src
```

```
>ctags -R *
```

- Add the following two lines to `/.vimrc`:

```
set nu
```

```
set tags= /Desktop/pintos/src/tags
```

# Testing

```
>cd threads  
>make check
```

# gdb

```
>cd threads/build
```

```
>pintos -gdb - run multi-alarm
```

- Open another terminal

```
>pintos-gdb kernel.o
```

```
(gdb) target remote localhost:1234
```

- Then, you may be able to debug pintos in gdb
  - You may omit the following warning:  
warning: Remote failure reply: Eff  
0x0000fff0 in ?? ()

Pintos manual Chapter 2 and Appendix A, B, D, and E.
